CARE170 SPEAKERPHONE

WITH EMERGENCY CALL FUNCTION

Emergency pendant could save lives

The phone's emergency pendant can be worn around your neck or on the wrist and should the user fall, feel threatened or be unable to reach the phone they just press the red button on the

pendant or the SOS button on the phone. This remotely activates the emergency call message which is sent to the users chosen numbers. The people alerted hear the pre-recorded message that assistance is required.

High performance, hands-free speakerphone makes it easy for those with poor hand dexterity

People who suffer from poor hand mobility and dexterity don't need to pick up the handset to take a call. They can simply answer the phone

by pressing the speakerphone button on the base or the button on the pendant. Thanks to the TP170 they can talk pain-free for hours on the speakerphone.

Only answer the calls you want with Talking Caller ID*

Now users can avoid any prank calls. The TP170's talking Caller ID announces the callers name or number loudly and clearly so that users can identify the caller before they take the call.

Waterproof SOS personal remote

For total convenience the SOS personal remote pendant is waterproof. It can be worn around the neck or wrist in the shower or bath.

Amplified receiver makes it easy to hear

The TP170's amplified receiver provides 20dB of extra loud ear piece amplification for the hard of hearing. The phone contains an in-built inductive coupler which offers Hearing Aid users clearer sound. Simply switch the hearing aid to the 'T' setting to use this function.

Talking keypad

The talking keypad speaks out the numbers as they are pressed so that users know they have dialled the correct button.

Visual ring indicator

Ideal for the hearing impaired, the TP170 has a large flashing indicator that lights up when a person calls. The bright red light flashes so that users can actually see that they have an incoming call.

Life-saving battery backup in case of power failure

In the case of a power failure, batteries power the phone for up to 12 hours so that users can always reach others.

The phone includes 4 x AA batteries. A low battery indicator tells users when it's time to replace the batteries so that they are always prepared.

Warnings and Warranty

The phone will only work if you adhere to the installation, programming and other requirements as well as observe the warnings, all contained in the user guide. Our product user guide contains information on the warranty, limitations of warranty and exclusion of liability in certain circumstances.

You can obtain a copy of the user guide or further information from our website or by phoning our Customer Support Service on 1300 889 785.
