

Operating Instructions

DTX4000 80 Channel UHF Citizen Band Radio

Keep this user guide for future reference. Always retain your proof of purchase in case of warranty service.

www.oricom.com.au

When a narrowband radio receives a transmission from an older wideband radio the speech may sound loud and distorted – simply adjust your radio volume for the best listening performance. When an older wideband radio receives a signal from a new narrowband radio the speech may sound quieter - simply adjust your radio volume for best listening performance. When operating a narrowband radio or Channel 41 - 80 interference is possible from wideband radios transmitting on high power or on adjacent frequency.

The issues described above are not a fault of the radio but a consequence of mixed use of wideband and narrowband radios.

This unit complies with all relevant Australian and New Zealand approval requirements AS/NZS 4365:2011

Introduction

Thank you for choosing the Oricom DTX4000 5 watt UHF CB Radio.

Key Features

Dual receive

IP54 dust and splash resistant

12/24 volt operation

3 memory groups of 16 channels per group

Removable and reversible front panel

Multi-colour backlit display

Back light brightness (5 pre-set levels plus auto)

Fast scanning 80 channels within 3 seconds

Rotary volume/channel and squelch control

Duplex

38 CTCSS & 104 DCS codes

Heavy duty diecast metal chassis

Slide-in mounting bracket

Auto power off (off/1h/2h/4h)

3.5mm external jack (for optional external speaker or PA adaptor)

Optional Accessories

Remote head mounting kit

External speaker

PA adaptor jack

PC programming cable and software to allow programming of memory location

Rear Microphone cable

Please read before installing or operating your Oricom Radio

The operation of your UHF radio in Australia and New Zealand is subject to conditions in the following licenses:

In Australia the ACMA Radio communications (Citizen Band Radio Stations) and in New Zealand by MED the General User Radio License for Citizen Band Radio.

Safety Information and Warnings

Potentially Explosive Atmospheres

Turn your radio OFF when in any area with a potentially explosive atmosphere. Sparks in such areas could cause an explosion or fire resulting in injury or even death.

NOTE: Areas with potentially explosive atmospheres are often, but not always clearly marked. They include fueling areas such as below deck on boats; fuel or chemical transfer or storage facilities; areas where the air contains chemicals or particles, such as grain, dust, or metal powders; and any other area where you would normally be advised to turn off your vehicle engine.

Blasting Caps and Areas

To avoid possible interference with blasting operations, turn your radio OFF near electrical blasting caps or in a "blasting area" or in areas posted: "Turn off two way radios." Obey all signs and instructions.

Electromagnetic Interference/Compatibility

Nearly every electronic device is susceptible to electromagnetic interference (EMI). To avoid the possibility of electromagnetic interference and/or compatibility conflicts, turn off your radio in any location where posted notices instruct you to do so such as health care facilities.

When installing your radio in your vehicle, check that during installation you do not damage any wiring or vehicle components that may be hidden around the mounting position. Ensure the installation does not interfere with the operation of the vehicle and meets all regulatory and safety retirements for accessories fitted to your vehicle.

For optimum performance your radio needs to be installed correctly. If you are unsure about how to install your radio, we suggest you have your radio professionally installed by a UHF specialist or Auto electrician. When installing the radio, avoid mounting it close to heaters or air conditioners. Never press the PTT or CALL button before connecting the antenna to the radio.

Wiring Methods

There are two possible wiring configurations for connecting to the Vehicles power supply.

A. Radio stays ON when the ignition is switched OFF

Connect the radio's negative (black) lead to the vehicle chassis, or directly to the batteries negative terminal.

Connect the radio's positive (red) lead via the 3 Amp fuse to the battery's positive terminal. Alternatively, the positive lead could be connected at the fuse box at a point that has DC Power continuously available (preferably the battery side of the ignition switch) via the 3 Amp fuse.

B. Radio turns OFF with the ignition switch

Connect the radio's negative (black) lead to the vehicle's chassis, or directly to the batteries negative terminal.

The radio's positive (red) lead should connect to an accessory point in the vehicle's fuse box via the 3 Amp fuse.

Antenna information

The antenna (not supplied) is of critical importance, to maximize your output power and receiver senstivity.

A poorly installed, inferior quality antenna or one not designed for the correct frequency band will give poor performance. You should only purchase an antenna designed for the 477MHz frequency band.

Antenna installation

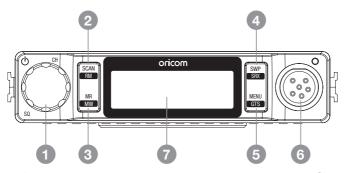

- 1. Connect the antenna to the rear antenna socket using a PL259 coaxial connector (not supplied).
- To obtain maximum performance from the radio, select a high quality antenna and mount it in a good location. Never press the PTT or CALL button before connecting the antenna to the radio.

Optional External Speaker

Depending on the installation it may be necessary to use an external speaker (not supplied) to give improved volume and clarity. This can be plugged into the EXT –SPK socket on the rear of the unit.

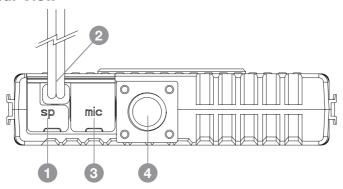

Controls and Indicators

Front View

- Power on/off and Volume/channel/squelch selector and SVL (sub receiver volume)
- 2. Scan (open scan/memory group scan)/scan skip memory
- 3. Memory recall/memory write
- 4. Main & Sub channel swapping/SRX on/off
- 5. Menu/Group tone scan
- 6. Microphone connector
- 7. LCD display

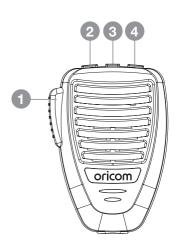

Rear View

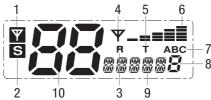

- 1. 3.5mm external jack for optional 8 ohm speaker and PA speaker
- 2. Power supply connection
- 3. Rear microphone jack for Optional extension Microphone cable
- 4. Antenna Connection

Microphone

- 1. Push to talk
- 2. Volume/Channel/SQ/SVL down
- 3. SWP/Mode selector
- 4. Volume/Channel/SQ/SVL up

LCD Icons & Indicators

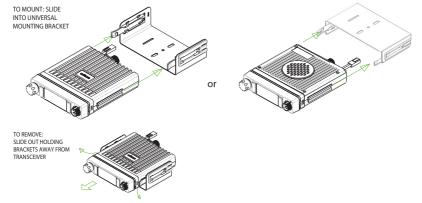

- 1. Sub Receiver Busy
- 2. Sub Receiver On
- 3. Duplex On
- 4. Main Receiver Busy 9. Status display
- CTCSS or DCS On
- 6. Signal strength & TX power & SWR meter
- 7. Group display (A, B, C group)
- 8. Group address channel
- 10. Channel display

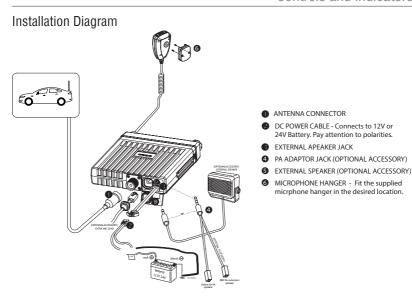

Installation of the DTX4000 and fitting optional accessories

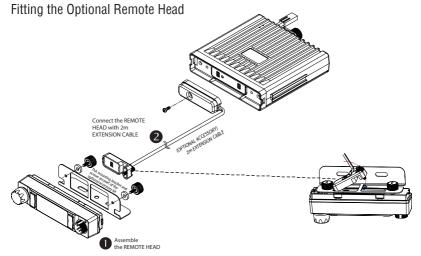

Mounting the Transceiver

The universal mounting bracket supplied with your transceiver allows overhead/dash mounting.

Mount the transceiver via the bracket, securely with the supplied screws, in the desired location, ensuring the surface is sturdy and can support the weight of the radio.

Operations

Turning on the Power

Press and hold the Channel selector.

Setting the Volume

Turn the channel selector clockwise to adjust the sound level for comfortable reception.

On the microphone push the up or down buttons to increase or decrease the volume. If held down the volume will increase or decrease quickly.

Selecting a channel

Press channel selector once. The "CH" appear on the LCD.

Select the channel by rotating the channel selector up or channel down.

On the microphone push the mode button and select the channel by pushing the up or down buttons.

Setting the Squelch Level

- 1. Press channel selector 2 times. The current squelch level is displayed.
- 2. Select the squelch level by rotating the channel selector.
- 1 Max sensitivity (Min. squelch)
- 15 Min. sensitivity (Max/Tight squelch)
- Off Open squelch

Setting SRX (Sub Receiver) Volume

- 1. Press Channel selector 3 times "SVL" is displayed.
- 2. Rotate the Channel selector to adjust the SRX volume.

Note:

* If a button is not pressed within 2 seconds the radio will automatically exit the sub display of "VOL" "CH" "SQL" and "SVL".

PTT (Push-To-Talk) button

Pressing the PTT button activates the transmitter.

The RF (radio frequency) level will appear on the LCD as you are transmitting.

To receive, release the PTT button and then TX will disappear on the display.

When transmitting, hold the Mic two inches from your mouth and speak clearly in a normal voice across the front of the Mic area.

Scanning

The Scan feature allows you to search for active channels automatically.

There are 3 scanning modes;

Open Scan, Group Memory Scan and Group tone Scan (a special case of Group Memory Scan).

Open scan

Press SCAN/RM and scanning starts. The OS-SC sub menu display appears on the LCD.

When a signal is found, scanning will stop at that channel to allow the signal to be heard, then resume scanning when the channel is clear again.

The scan resume time can be set as an optional pause of P8 (default).

ch 1-2-3-4-5-6-7 77-78-79-80

Open Scan, the scan direction cannot be changed by rotation of the channel control or microphone buttons.

To stop the scan press the SCAN/RM button or press the PTT

Remove Memory in Scanning

While the radio stops scanning on a busy channel, press hold SC/RM button for 2 seconds.

Channel will be remove from current scanning. The removed channel will be reinstated after the scan is stopped and restarted.

Scan 1-2-3-4-5-6-7 77-78-79-80

RM Scan 1-3-4-5-6-7 77-78-79-80

Note: Up to 10 channels can be removed for the current scan.

For this example we are removing CH02 during the scan. Because it is only noise.

- 1. Press SC/RM button for 2 seconds.
- 2. Scanning will resume.
- 3. Channel 02 is removed during scan.

Group Memory Scan

Memory scan must be stored to the memory channels in groups A to C. Refer to memory recall function.

- 1. Press MR/MW button to change the setting between A, B, C and blinking A, B, C.
 - When blinking, then all groups will be scanned starting in selected group.
- Press Scan button to start group scan.The MS-SC sub menu display appears on the LCD.
- 3. To stop Group memory Scan, press SCAN/RM button or PTT press.

Group tone Scan

Group tone scan is the default scan mode and is enabled to allow continual communication across congested channels.

Group Tone Scans channel stored into Group memory scan and only opens the squelch for signals with the correct sub code (38 CTCSS or 104 DCS tone).

To achieve this, all radios in your group must have the same channels in A, B, C memory (group memory channels) and use the same Subcode (38 CTCSS and 104 DCS tone).

1. Press hold MENU/GTS button to Group Tone Scan.

All group tone scan stored into Group memory channel and CTCSS 01 (67Hz) is set for Group Tone Scan.

The Group tone code can be change by menu mode.

2. To stop Group memory Scan, Press MENU/GTS button or PTT press.

Memory Recall

This feature allows the user to active the stored channels in the MR button

To access channel in the MR button, simply press the "MR" button, and the "A" will appear at the right side on the LCD. Press memory button you want to access From A to C Group.

Continuous Press MR button will be change to A->B->C->A blinking ->B blinking -> C brining ->A.

If SC/RM button press and start of all memory Group scanning at during the blinking A to C.

The DTX4000 has no information stored in the memory channels.

Memory Write

Select the channel you want to store.

For this example we write CH09 to B group and group channel 8.

- Press hold MR/MW button. The memory write.
 The appear A and group channel 1 blinking.
- 2. Press MR/MW button change for the B group.
- 3. Press channel selector change of CH mode.
- 4. Channel selector rotation until 8 is shown in group channel display.
- 5. Press hold MR/MW button to save & exit from memory write.

SWP (Swapping Dual RX channel)

The DTX4000 can receive two channels simultaneously.

The main receiver default channel is 12 and Sub receiver default channel is 40.

The Sub channel can be turned on and off by pressing and holding the SRX button the "S" indicator on the display will be on if the SRX is on.

It is not possible to transmit on the SRX you must swap the SRX and Main RX to transmit on that channel.

To adjust the volume of the SRX channel push the channel change dial 3 times the display will show SVL and the level.

SRX On/Off

Press hold SWP/SRX button to turn SRX off.

To return to Dual RX mode press and hold the SRX button for 2 seconds.

Menu list

- * Press menu button to access menu.
- * Use the channel dial to change the value of each setting.
- * If a button is not pressed within 8 seconds the radio will automatically exit the menu mode.
- * You can exit the menu by briefly pressing PTT button.
- * Please see below menu modes.

PA (Public Address)

To use and external PA speaker connect the optional PA cable to the External speaker jack on the rear of the radio, connect the PA speaker to the yellow coloured socket and the external CB speaker to the red coloured socket the output will be directed to the PA speaker when PA function is selected.

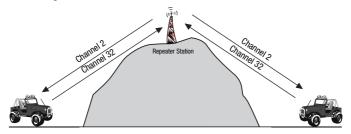

How to operate the Public Address

- 1. Press and hold the PTT while turning the power on
- 2. Press the PTT and speak into the microphone the audio will be output through the PA speaker
- 3. Adjust the volume using the volume control
- 4. To Exit PA mode turn radio off and back on

Duplex

General

Your radio has a Repeater Access function to allow use of local repeater station (if available in your area). Repeaters are shared radio systems installed by interested parties (clubs, local business etc.) that pick transmissions on specific channels and re-transmit (or repeat) the received signal to another channel.

The Repeater Access function can be set (from channel 1 to 8 and 41 - 48) used by local repeater stations. When activated, your radio will receive the Repeater on its specific channel (all repeater outputs are on channel 1 to 8 and 41 to 48) but transmit to the repeater channel 31 through 38 and 71 to 78.

(Factory default is set to On for all repeater channels).

e.g.

CH01 on Duplex mode will receive on CH01 but transmit on CH31.

CH02 on Duplex mode will receive on CH02 but transmit on CH32.

If you transmit on CH01 duplex mode, you are actually transmitting on CH31.

The repeater station down converts your signal and retransmits on CH01.

Your transceiver allows you to pre-select Duplex operation individually on each channel.

CH and	Simplex mode Transmit/Receiver	Duplex Mode transmit/Receiver
Number	Frequency (MHz)	Frequency (MHz)
1	476.425	477.175 CH31
2	476.450	477.200 CH32
3	476.475	477.225 CH33
4	476.500	477.250 CH34
5	476.525	477.275 CH35
6	476.550	477.300 CH36
7	476.575	477.325 CH37
8	476.600	477.350 CH38
41	476.4375	477.1875 CH71
42	476.4625	477.2125 CH72
43	476.4875	477.2375 CH73
44	476.5125	477.2625 CH74
45	467.5375	477.2875 CH75
46	476.5625	477.3125 CH76
47	476.5875	477.3375 CH77
48	476.6125	477.3625 CH78

For this example we are adopting CH01 as the channel being used for repeater use.

- 1. Press Menu to display Duplex setting.
- 2. Turn the channel selector to change the setting between ON or OFF.
- 3. Press PTT to save & exit from the menu mode.
- 4. R icon is displayed when a selected channel is set to Duplex mode.

CTCSS and DCS setting.

This feature allows you to receive signals only from callers who have selected the same CTCSS and DCS code.

DCS is similar to CTCSS. It provides 104 extra, digitally coded, squelch codes that follow after the 38 CTCSS codes. CTCSS 1 - 38, followed by DCS 1 - 104. (displays A0 to A4 for 100 to 104)

CTCSS and DCS are not available on CH05 and CH35. For your reference a list of the available channels, corresponding frequencies and guidelines for their use and selection is in the CTCSS and DCS channel list.

For Australia, channel 05 and 35 are reserved for Emergency calls.

Group Tone setting

The group tone scan default tone selected is CTCSS 01 (67Hz).

You can select from CTCC 01 - 38 to DCS 01 to 104 code for Group tone scan.

96 multi colour Backlight

You can select from 96 different multi colour backlighting for the LCD backlight.

Backlight dimmer

You can reduce the brightness of the backlight by selecting levels 1 to 5, off or Auto, which will adjust the level of brightness depending on ambient light.

Factory Reset

If the radio's display locks up or stops functioning properly, you might need to reset your UHF radio.

Before you reset your UHF radio, try turning it off and on again.

If your UHF radio is still not functioning correctly you may need to reset the UHF radio.

To reset

Press and hold SCAN/RM button while turning the power on.

The display "AL-reset" or "User-reset" will indicate reset type.

The reset type can select in menu mode.

The user reset will not delete any stored memory channels.

Squelch Tail

Squelch Tail is the noise heard after the transmitting party release PTT and is heard by the receiving party.

If Squelch tail in turned ON, on both radios this squelch noise will be muted.

Busy channel Lock

If the channel is already in use, you can prevent the UHF CB radio from transmitting. This is particularly important when using CTCSS/DCS.

Key Beep

The Beep tone emits a tone when you press any of the buttons on the microphone (except PTT button).

Logo Display

The logo display function can control disable and enable.

The off means Logo skip and power ON.

TPI

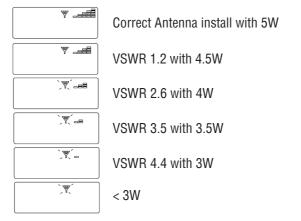

TPI Transmit Power Indicator

VSWR Voltage Standing Wave Ratio is a measurement of how good the antenna (and cable) is matched to the radios output. It is best measured at the antenna as the cable can effect this measurement.

TPI indicates the level of RF power delivered to the antenna connector.

This allows you to see how good the antenna is matched to the transceiver.

Generally a VSWR of less than 2 is an acceptable match.

The VSWR and Power test can vary depending on installation conditions. If TPI feature is turned off in the settings menu, the TPI indicator will show 5 bars during TX.

If an incorrect or no antenna is connected and power output is less than 3.5W, "ANT-X" will be displayed when TPI feature is turned on or off. When "ANT-X" is displayed, the radio has enabled protection mode and reduced RF output.

Treble

Allows adjustment of the level of higher audio frequencies in 8 steps use channel selector to select desired level.

Scan resume time

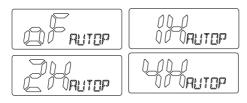

If 5, 10, or 15 sec is selected, SCAN will start again after 5, 10, or 15 second pause even though a signal is still present.

If P5 is selected, SCAN will stop as long as a signal is present and will resume SCAN again 5 seconds later.

Auto power OFF

The auto power off function activated when no receiving and transmitting of radio.

The automatic power off time can be adjusted to OFF, 1, 2, or 4 hours in menu mode.

UHF CB channels and frequencies

IMPORTANT NOTE: The operation of your UHF radio in Australia and New Zealand is subject to conditions in the following licenses: In Australia the ACMA Radio communications (Citizen Band Radio Stations) and in New Zealand by MED the General User Radio License for Citizen Band Radio.

- * The primary use for these channels is repeater operation using 750 kHz offset. Channels 1-8 inclusive are used for mobile reception and channels 31-38 for mobile transmission. Note that additional channels 41-48 and 71-78 are also available for repeater operation to supplement channels 1-8 and-31-38 respectively as approved by the ACMA CBRS Class Licence in Australia and the MED GURL in New Zealand. In addition, any designated repeater channel may be used for simplex operation in areas where it is not used for repeater operation.
- † Speech telephony shall be inhibited on these channels.
- ‡ At the time of production Channels 61, 62 and 63 are guard channels and are not available for use.

Channel 5 and 35 (paired for Duplex repeaters) are reserved as emergency channels and should be used only in an emergency.

CTCSS and DCS will not operate on these channels.

A list of currently authorised channels can be obtained from the ACMA website in Australia and the MED website in New Zealand. Channel 11 is a calling channel generally used to call others and channel 40 is the customary road vehicle channel.

Once contact is established on the calling channel, both stations should move to another unused "SIMPLEX" channel to allow others to use the calling channel.

Channels 22 and 23 are for Telemetry and Telecommand use, voice communications are not allowed on these channels by law.

Channel 9 and above are the best choices for general use in Simplex mode.

Express Warranty (Australia)

This Express Warranty is provided by Oricom International Pty Ltd ABN 46 086 116 369, Unit 1, 4 Sovereign Place, South Windsor NSW 2756, herein after referred to as "Oricom".

Oricom warrants that the product is free from defects in materials or workmanship during the Express Warranty Period. This Express Warranty does not extend to any product from which the serial number has been removed or was purchased outside of Australia.

The benefits of this Express Warranty are in addition to other rights and remedies you may have under the Australian Consumer Law. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure. In the event of a minor failure, Oricom reserves the right to choose to repair or replace the product.

The Express Warranty Period will be a period of 5 years beginning on the date of purchase of the product evidenced by your dated sales receipt. You are required to provide proof of purchase as a condition of receiving Express Warranty services.

You are entitled to a replacement product or repair of the product at our discretion according to the terms and conditions of this document if your product is found to be faulty within the Express Warranty Period. This Express Warranty extends to the original purchaser only and is not transferable

Products distributed by Oricom are manufactured using new materials or new and used materials equivalent to new in performance and reliability. Spare parts may be new or equivalent to new. Spare parts are warranted to be free from defects in material or workmanship for thirty (30) days or for the remainder of the Express Warranty Period of the Oricom branded product in which they are installed, whichever is longer. During the Express

Warranty Period, Oricom will where possible repair and if not replace the faulty product or part thereof. All component parts removed under this Express Warranty become the property of Oricom. In the unlikely event that your Oricom product has a recurring failure, Oricom may always, subject to the Competition and Consumer Act 2010, at its discretion, elect to provide you with a replacement product of its choosing that is at least equivalent to your product in performance.

No change to the conditions of this Express Warranty is valid unless it is made in writing and signed by an authorised representative of Oricom.

Oricom will not be liable under this Express Warranty, and to the extent permitted by law will not be liable for any defect, loss, damage or injury arising out of or in connection with a:

- 1. Failure by you to adhere to the warnings and follow the instructions set out in this user guide for the proper installation and use of the product;
- 2. Willful misconduct or deliberate misuse by you of the product;
- 3. Any external cause beyond our control, including but not limited to power failure, lightning or over voltage; or
- 4. Modification to the product or services carried out on the product by anyone other than Oricom or Oricom's authorised service provider.

How to make a claim under your Express Warranty in Australia

Oricom has a simple warranty process for you to follow:

- Please call or email our Customer Support Team, 02 4574 8888 or support@oricom.com.au.
- A Customer Support Team member will verify after troubleshooting with you if your product qualifies under warranty. If so, they will give you a Product Return Authorisation number.
- We will then email a Return Authorisation form and a Repair Notice (if necessary), together with instructions on how to return the product for warranty service.

Please note that if a Customer Support Team member advises that your product does not qualify for return, this warranty does not apply to your product. Products that are authorised to be returned to Oricom in Australia must include all of the following:

- A completed Return Authorisation form
- A copy of your Proof of Purchase (please keep your original copy)
- The faulty product, including all accessories.

Send the approved returns to:

Oricom International Pty Ltd

Locked Bag 658

South Windsor NSW 2756 Australia

Please note that this Express Warranty excludes expenses incurred by you in returning any faulty product to us. You must arrange and pay any expenses incurred (including postage, delivery, freight, transportation or insurance of the product) to return the faulty product to us, however, we will arrange delivery of the repaired or replaced faulty product to you.

Important Information Repair Notice

Please be aware that the repair of your products may result in the loss of any user-generated data (such as stored telephone numbers, text messages and contact information). Please ensure that you have made a copy of any data saved on your product before sending for repair. Please also be aware that products presented for repair may be replaced by refurbished products or parts of the same type rather than being repaired.

ORICOM CUSTOMER SUPPORT

Oricom have a trained and dedicated team of Customer Support Representatives, each with the knowledge and resources to assist in answering your questions quickly and efficiently.

Oricom Support - Australia

For all product enquiries, troubleshooting or to discuss the range of Oricom products, feel free to contact Oricom or visit our website for answers to frequently asked questions.
